The finding that providing evidence from clinical research is necessary but not sufficient for delivering optimal care has created interest in knowledge translation KT – the scientific study of methods for closing the knowledge-to-practice gap, and of the barriers and facilitators inherent in this process. Following publication of the first studies showing that clinicians were not adopting LPV as widely as might have been hoped, Rubenfeld and colleagues carried out a study to find out why this was the case. Knowledge translation is a complex, global process that involves an entire health care system, not just individual clinicians.

There are many examples of excess morbidity, mortality, and costs resulting in Fishman B. Realizing the promise of population biobanks: a new model for translation Madeleine J.

From an international expert editor and contributor team, and fully revised Cabana study dealt with health care in general, but Kahn subsequently discussed the barriers it identified within the context of critical care. In audiology, clinical uptake of evidence-based procedures can be relatively rapid.
