Your coupler is fine, but your lid switch or belt might have gone bad, or, your motor, transmission or clutch could be failing or need replacement. Machine is back in action. The smell of a hot electrical motor was present, but not overloaded.

Replacement was just a reverse process, with the addition of a light coat of grease. Remove the screws 23 and retainer clips I'm a keep it simple type, to each his. Turn off the water supply and disconnect the supply lines from the back of the appliance. Remove the screws 23 and retainer clips Screwdrivers, Socket set. The washer should completely go dead for a few seconds and then start back up in spin. I managed to get one on the motor yesterday, but I'm having a more difficult time putting the other coupling on the transmission.
